

Logo on Receipt - **HOW TO**

Create Image

Step 1: Edit the image of the logo to the correct format. This format is very important.

Especially point (a)

- a) 1 bit
- b) BMP
- c) 256 pixels across
- d) Call it Header.BMP

Examples of finished logos:

As you can see they are only black and white and the quality drops.

Step 2: Copy Header.BMP to the Menumate directory. E.g c:\program files\menumate or c:\program files (x86)\menumate

Configure Menumate

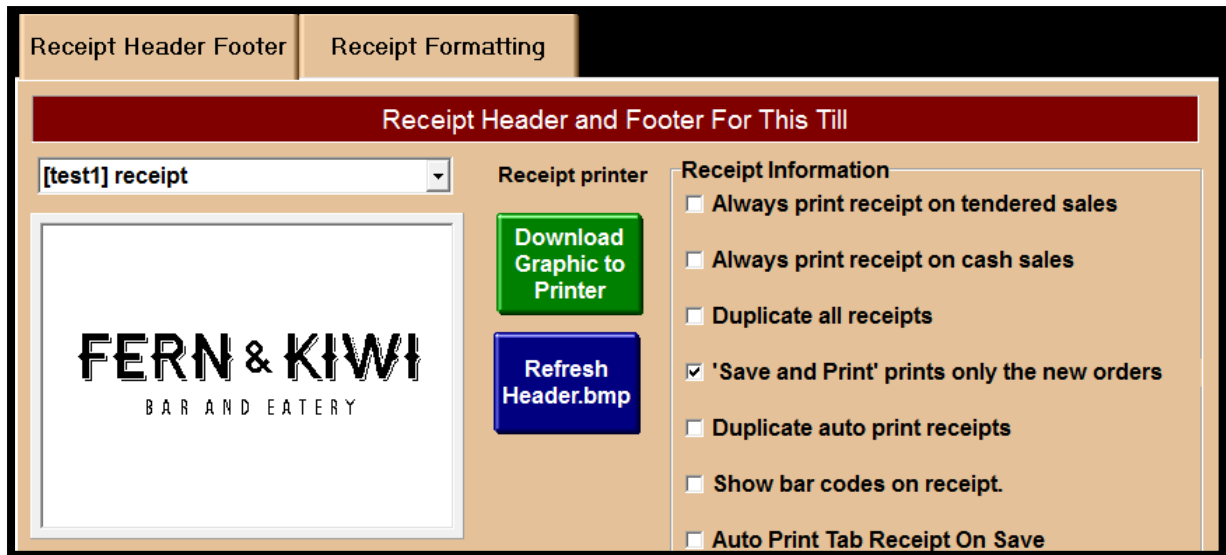

Step 1: Run Menumate and go to **Maintenance** then **Printer Maintenance** followed by **Setup Receipt Docket Format**.

Step 2: Click on **Receipt Header Footer** in the top left.

Step 3: Click on **Refresh Header.bmp**. If the image has been setup correctly it will show in the white box to the left of this button. See image on next page.

Step 4: Press **Download Graphic to Printer**.

Step 5: Test by clicking on **Test Header**.

Tip

If the logo prints out left justified then you will need to edit the image file so that the logo is in the middle of the 256 pixels, giving it white space on either side.

Example below, the black borders are the edges of the image. The first image would print left justified; the second would print in the middle of the docket.
